

We-Capture for Infusion

Would you like to Capture a signature for proof of delivery?
Do customers question the accuracy or integrity of your work?
Photos will help with this.

We-Capture is the App based image Transfer System that allows images to be taken on a phone, or iPad and directly added to your Infusion Job. Store and manage images of the item being serviced with before and after photos. The system includes photo display and easy searching, with customisable app and email templates.

We-Capture will also allow customers to sign as Proof of Delivery, with the signature captured and stored against the Job in Infusion.

We-Capture for Infusion is powered by We-Integrate Ltd, an independent software company based in Auckland, New Zealand. Established in 2012. Currently the system is used by over 4000 users including Collision Repairers, Rental Car Companies, Automotive Workshops, Freight and Logistics, Property Managers and many general contractors.

New! **WeCapture with Custom Docs** lets you load PDF documents into WeCapture to be completed as part of a job or process. Data entry is quick and easy with documents that can be as simple or complex as you choose. Ideal for site assessments and any other OSH compliance documents you may need to complete.
